ERRATA

OWEN GARNIER

I try to keep this erratum up to date. If you find an error which is not listed here, do not hesitate to contact me (last update:03/07/2026).

1. Generalization of the Dehornoy-Lafont order complex to categories. Application to exceptional braid groups

- Table 1: The number of 4-cells in the complex of B_{29} in [Mar17] is 104 and not 108.

2. Uniqueness of roots up to conjugacy in circular and hosohedral-type Garside groups

- Second paragraph after Theorem 1: The question of uniqueness of roots up to conjugacy was also solved in the affirmative in [CLL15] for braid groups of imprimitive complex reflection groups.

3. Garside groupoids and complex braid groups

- Table before Perspectives et conjectures: $H_2(B(G_{31}), \mathbb{Z})$ should be $\mathbb{Z}_6$ instead of $\mathbb{Z}^6$.
- Table before Perspectives and conjectures: $H_2(B(G_{31}), \mathbb{Z})$ should be $\mathbb{Z}_6$ instead of $\mathbb{Z}^6$.
- First theorem in Résultats sur le groupe de tresses complexes $B(G_{31})$: the short exact sequence should be between the respective centers of $P(G_{31})$, $B(G_{31})$ and G_{31}.
- First theorem in Results on the complex braid group $B(G_{31})$: the short exact sequence should be between the respective centers of $P(G_{31})$, $B(G_{31})$ and G_{31}.
